

Ultrafabrics Environmental Commitment

Our Purpose

We believe there is beauty in balance, and you should never compromise on performance, comfort, or sustainability. It's this perspective that has inspired our work since our inception in 1999.

We've outlined sustainable specifications intrinsic to our materials:

- Low VOCs promote healthier indoor air quality
- SCS Indoor Advantage Gold certification
- REACH Compliant
- Japanese mill ISO 14001 certified
- Over 98% of solvents recaptured and recycled
- 33% of our portfolio contains renewable TENCEL™ Modal fibers
- EPA-registered agents (antimicrobial, antibacterial and anti-mildew)
- Meets stringent chemical emission limits

Our Plan

By 2030, our goal is for 100% of our portfolio to contain at least 50% rapidly renewable or recycled materials. By 2025, we're committed to a 20% reduction in water usage.

We do not add:

- Bisphenol A (BPA)[†]
- Conflict Minerals
- Flame Retardants
- Heavy Metal Stabilizers
- Formaldehyde
- PFAS*/PFOA
- Plasticizer Phthalates
- POPs (Persistent Organic Pollutants)
- PVC (Polyvinyl Chloride)

*Excludes Reef Pro, Ultraleather® Pro, and select custom collections.

**Please note that the information, certifications, goals, and progress shared does not apply to Uf Select.

[†]In line with our commitment to sustainable material innovation, we have chosen to incorporate recycled polyester fibers in select collections. Due to the recycling process of the plastic bottles, there is a slight possibility of trace amounts of BPAs being present in collections with the 65% recycled polyester/35% rayon backcloth.

TENCEL™ is a trademark of Lenzing AG
