

Outdoor Cushioning Recommendations

Recommended Maintenance Instructions for Ultrafabrics® Outdoor Collections

One of the best ways to keep Ultrafabrics Outdoor surfaces looking great is to properly maintain them by covering and cleaning regularly to prevent excessive dirt from accumulating.

- All Ultrafabrics Outdoor fabrics should be stored in a dry, well-ventilated area
- Cushions should be covered except when wet, as this will increase the chances of mildew growth
- Ultrafabrics Outdoor materials do not promote mildew growth, however, mildew may grow on dirt and other foreign substances that are not removed from the fabrics
- The frequency of cleaning will vary greatly depending upon the local outdoor environment in which the fabric is used

Note: Our Outdoor fabrics perform best when they are paired with an open cell, reticulated, quick-drying foam and/or a waterproof, anti-mildew barrier between the fabric and foam. Utilize air vents and/or a mesh, open weave fabric bottom to release moisture.

Venting – Breathable vs. Non-breathable:

Breathable styles do not require venting.
Non-breathable styles do require venting.
